

MEMORANDUM: SLASHING TRIAL NO-SHOWS

TO: Founder's Office & Finance • FROM: AI Forward Deployed Associate • DATE: September 21, 2026

FINANCE SIGNED-OFF MODEL

GROSS CEILING (TAM OF LEAK)
₹61.62 Lakhs
584.5 No-Shows / mo (100% cap)

RECOVERABLE IMPACT
(BENCHMARKED)
₹24.12 Lakhs/mo
₹2.89 Cr / year run-rate

PRE-REGISTERED BASELINE
63.80% Show Rate
1,614.5 scheduled demos/mo

TARGET METRIC (INTERNAL BENCHMARK)
78.00% Show Rate
+40.2 Paid Customers/mo (68.9x ROI)

1. THE LEAK: GROSS THEORETICAL CEILING VS. REALISTIC RECOVERABLE LOSS

Across 5,000 leads (June–July 2026; 2,500/mo) at ₹60k revenue/customer and ₹900 CAC, the single largest revenue drain is the **Pre-Demo No-Show Drop-Off (Scheduled → Joined)**. Out of 3,229 scheduled demos, 1,169 parents failed to attend (**584.5 no-shows/mo; 36.20% no-show rate**).

Funnel Stage	Monthly Vol	Stage Conv %	Funnel %	Financial Leak Working (INR / Month)
Lead → Demo Scheduled	1,614.5	64.58%	64.58%	885.5 unscheduled leads/mo = ₹7.97L flushed CAC (₹38.47L lost rev at 7.24% conv)
Demo Scheduled → Joined	1,030.0	63.80%	41.20%	584.5 NO-SHOWS × 17.57% conv × ₹60,000 = ₹61,62,786 / MO THEORETICAL CEILING
Demo Joined → Completed	893.0	86.70%	35.72%	137.0 in-demo drops × 20.27% conv × ₹60,000 = ₹16.66L / month
Demo Completed → Converted	181.0	20.27%	7.24%	Baseline revenue: ₹1,08,60,000 / month (Net contribution: ₹86.10L / mo)

Root Cause & Empirical Target Grounding: Sizing requires distinguishing the *theoretical ceiling* (₹61.62L/mo if 100% of no-shows attended) from *recoverable cash*. In the dataset, leads scheduled within 24–48h **already achieve a 77.52% show rate** (22.5% no-show). Show rate collapses to **45.4%** when lag exceeds 48h. Our 78.0% target is therefore an **internal empirical benchmark**, not an assumed guess. Closing this lag gap recovers 229.3 attendees/mo (≈ 172 wasted rep hours in empty Zoom rooms).

2. THE LEVER: AI WHATSAPP ATTENDANCE CONCIERGE ("AARAV") & TRADE-OFFS

The Chosen Lever: A 2-way conversational WhatsApp agent triggered instantly upon demo scheduling via CRM webhook (Wati/Aisensy + Make.com). Delivers:

- Instant 1-Click Calendar Sync:** Injects Google/Apple Calendar links (.ics) + 30s project teaser video.
- Interactive T-24h / T-2h Confirmation:** 1-tap buttons ("Confirm Spot" or "Reschedule").
- T-10m Direct Launch:** Pings parent with 1-tap Zoom link and laptop audio/browser checklist.
- Recoverable Financial Impact:** Slashes no-show rate from **36.2% to 22.0%** (anchored to the 24–48h benchmark; 229.3 attendees recovered/mo). At historical 17.57% join-to-paid conversion, yields **+40.2 paid conversions/mo = ₹24,12,000/mo incremental revenue** (₹2.89 Cr/yr) against ₹35k/mo tool cost (68.9x ROI).

Alternatives Considered & Rejected

- Rejected 1: Outbound AI Voice Bot:** High consumer friction; >60% parents hang up; severe TCPA/DND compliance penalties across US/UK.
- Rejected 2: Timezone Routing Alone:** Two-proportion z-tests prove *only the USA effect is statistically significant* (z = 2.65, p = 0.008, unlocking ₹11.31L/mo). Other cells are sample noise. Even on US_SHIFT, US no-show is 30.4%. We deploy USA routing as a Day-1 CRM rule, but focus the primary build on attendance.
- Rejected 3: Post-Demo Pitch Copilot:** Requires >6 wks coaching, subjective adoption, and ignores empty demo rooms.

3. BIGGEST ADOPTION RISK & OPERATIONAL MITIGATION

The Core Risk: Rep Workflow Bypass & Parent Spam Fatigue. Counselors might mistrust bot statuses and continue double-calling parents, causing confusion, while parents might block automated WhatsApp alerts.

Mitigation Plan: (1) **Zero Rep Disruption:** Bot directly updates CRM custom field attendance_status (CONFIRMED, RESCHEDULE_PENDING). In morning standups, reps are instructed: "Green means locked; don't call." Reps save 172 hours/month. (2) **Value-First Content:** Messages are not generic reminders; they contain the child's customized coding project link. (3) **Instant Opt-Out:** Replying "STOP" triggers immediate unsubscribing and tags CRM DO_NOT_CONTACT.

4. MEASUREMENT FRAMEWORK & PRE-REGISTERED BASELINE

Measurement Design: 14-day 50/50 randomized A/B test on all newly scheduled demos (split by Lead ID modulo).

- Pre-Registered Control Baseline:** Demo Scheduled = 1,614.5/mo • Demo Show Rate = **63.80%** • Demo Join-to-Paid = **17.57%** • CAC = ₹900.
- Primary Success Metric:** Demo Show Rate in Variant reaches **≥ 78.00%** (anchored to 24–48h benchmark of 77.52%; p < 0.01).
- Guardrail Metrics:** Parent WhatsApp opt-out rate < 2.5%; Demo completion rate post-join holds at **≥ 86.0%**.
- Finance Verification Formula:** ΔRevenue = N_sched × (ShowRate_Variant – ShowRate_Control) × 17.57% × ₹60,000. Verified weekly by FP&A.
